You are right! I've identified what's the problem with the newer Radeon Bios card under U-boot on the Sam boards, but ATM I didn't find any solution about it.

Can it be the same reason why my r7-250 (marked as HD Verde) has also no uboot shown?

@All

Shouldn't the keyboard's num lock work even if i have no bootable device attached and have no uboot shown?

@Spectre

As for PCI-E slot, I have found there is cases in shops with vertical placement for the video card, so together with riser cable, it can fit pretty well. Now only to find an HD card which works fine in Uboot, WB, Compositing, and Warp3d/Warp3DNova :)
