So try all your Keyboards

I have usual logitech one, and this one works in both X5000 and even in pegasos2. If it will not works in Sam, that will be kind of strange :) Firstly i need to see Uboot for start.

But what for sure, if Sams is will be produced futher, there should be fixed issues with RadeonRX in uboot, and with non-working RadeonHD which works in x5000 but not in Sams.
