If HDMI works in UBOOT will it work in OS4 (RadeonHD driver)?

Hi I have a Sam460ex with Radeon AMD Sapphire 6450 card. The VGA and DVI outputs work OK but I didn't get HDMI to work, I even talked to HDR about it but we concluded it didn't work.

But then I was messing around today with my config and discovered HDMI works on UBOOT with this card. Apparently I never tried this before or at least it didn't work that time.

So now I'm thinking maybe it does work and I just have wrong settings somewhere. Thoughts?
