George Wittmann (Former Hörmann) is back to make changes to VirusZ and xvs.library, but George needs your help.

George writes: After 15 years of doing absolutely nothing on my Amiga, and many people asking me again and again if I would like to release the sourcecodes of VirusZ and xvs.library, I now have decided to do so... But before that, I finally want to fix VirusZ and xvs.library for MorphOS, AROS and AmigaOS 4.x systems, and therefore I need some help as I actually don't have any of these systems (only AROS inside WinUAE as m68k version).

So this is why I've written this small tool here.

MAA4SIC just collects information about your system and dumps that to your Shell window. Just redirect the output to a file and send it to: schorsch.wittmann@gmx.de

If you are running on MorphOS, AROS or AmigaOS 4.x MOS/AROS/AOS4 System Info Collector tool

- Download (From Aminet)
