How to print text in RGB colour?

URL:

Is there any way, anywhere, on AmigaOS 4 to draw plain text in an RGB value without resorting to 35 year old technology (planar palette)??

Something as simple as

```
graphics.library->SetAPenRGB(red,green,blue); //NO stupid palette number involved
```

```
graphics.library->Text(rp, "Hello world!", 12);
```

Or do I just have old SDK documentation? 😊
