URL:

I made more of the GUI translatable, so there some extra text that needs to be added.

there is lots of languages without translation, I have updated the readme on github page on how to contribute to translations, no programming skills needed!

<https://github.com/khval/BasiliskII-1.0>

When translations are updated, I will release new version of Basilisk II.

it removes a lot of debug, and extra console windows.

it finally has good clipboard support, new line are respected, clipboard text is translated to/from MacOS (the new changes are based on the UNIX version).
