Eternal Glory!!

Well sort of. My Sam440 works with my R9 270X.

So far I've booted into workbench. Going to test if 3D works as well.

So apparently I'm the first one who got the sam440 working with a SI card.

But it doesn't work with with my RX560 yet. It seems to freeze when displaying the amigaos4.1 boot image

The RX560 has problems in my X5000 as well so I wouldn't draw any conclusions from that.
