With removing -gai you link against those functions in the newlib => issues.

And nope, it didn't works with local gaming as well (because of that threaded network issues, for details check latest 5-7 posts about)

As for Mod Error Mod Security, that can be disabled in config.

But for real until we didn't deal with those network issues, all other issues can wait, as if we didn't deal with network threading code it all make no sense then :(
