Enhancer20 covers RadeonHD, RadeonRX va.library (accelerated video playback for RadeonRX cards with Emotion player) and Warp3d**Nova**.

To run those old warp3d and minigl programs you have two choices:

- 1) For limited warp3d support you can use minigl4gl4es. (os4depot)
- 2) For best warp3d compatability you have to buy warp3d\_SI. This offers a warp3d library for RadeonHD Southern Island GPUs.
