I was thinking about using the ethernet on the motherboard. Maybe i do so i m not sure. I really would like to change the CPU fan that makes alot of noice. I m abit afraid to do it myself because i dont want to screw anything up. I need to find a silent fan for my cpu. I have to ask somebody what to choose from.

@geennaam

So my Radeon HD is a polaris graphiccard i can use? I bought and downloaded Warp3D-SI package. My biggest problem now is that i cant upgrade RadeonHD from 0.65 to a newer one. I click on Update RadeonHD driver and i insall it and reboot but i still got 0.65 version. Any idea how to solve this?
