@mr2

Will be also interesting if you can try some of my ports too: H-Craft (press f11 for FPS), SuperTuxKart (there fps enabled by default) , Nights of the Zombies (in window mode FPS in the title of the window), "Worlds" (in window mode FPS in the title of the window) and NeverBall (there i do not remember if FPS is enabled by default or not).

@Capehill

Yeah, I was about to say the same: 30 fps mean he has VSYNC enabled. But then it also means, that it for sure not more than 60 (as when rendering is less than 60 in shaderjoy it then switches to 30 if can reach it too).
