@NinjaCyborg

Just look at the post #6.

@LiveFort

So I can say that Basilisk works very slow. The only working displays are B&W (Window and Window composition) with the internal conversion. I can turn on the colors from MacOS prefs, after loading the OS. All other displays don't work for me. Sometimes MacOS loads (I can hear a notification sound) but there is no display, sometimes it crash. Overall it is too slow (CPU 99/100%) to use on my SAM. Unfortunately after all hard crashes I have to turn off the power for several minutes because if I do it faster (e.g. 15/20 s) SAM does not boot.

@kas1e

Night Of The Zombies runs at **7 fps**-is it possible to lower the resolution?

foobilard++ is very playable and looks very good, prevoius version was unplayable with R9250 😞

more to come...

@sailor

...so, you were hiding 😞
