You are correct, the name of the service must be given. It's not sufficient to just provide the server address.

This might work better:

```
smbfs cache=1024 volume=condivisa Workgroup=WORKGROUP User=davide Password=mypassword  
Service=//192.168.1.7/condivisa
```

This is in the documentation, by the way, but given its length it's not for the faint of heart.
