With RadeonRX 2.5 I can no longer play the Power of Color Demo linked here somewhere. Sound plays, but the video screen is split diagonally with a black bottom and a very dark green or red (alternates as video progresses) top. I have "Power" prefs saved to high power. With RadeonRX 2.4 it played very nicely.

The DeSTiNY video linked elsewhere still plays as before without sound. One of my own .mp4 videos from church plays video and sound fine.
