On real hardware how many audio channels are selected
for example 4 - 8 or else more in this case for sb128 ?
thanks for any advice.

by selecting multiple audio channels, multiple applications working at the same time benefit ?

I worked hard to make multiple applications used at the same time compatible and I noticed that audio plays an important role at least in my case.

here for example e-uae odyssey (aio) and emotion that work together without slowing down:
