Awesome video... Did you do it on Amiga :D

Just a comment. I saw that you created your partitions with 1024 block set. As you use SSD I believe you should use 4096 blocks, because that's what the SSDs are using, and that doesn't change.

I might be wrong, but if you use 1024 block you are losing the 3/4 of the block, so you are losing space.
