I'd probably get a faster AmigaOS 4 experience emulating it on my PC instead of using the Sam440ep-flex. I just haven't done the fiddling to set it up.

I have installed on fast PC latest WinUAE and os4 classic on it: it slow. In some areas it surely slower than even Sam440EP. And if you have in your Sam440EP a Radeon RX, then WinUAE will not only slower but also didn't allow you to use all that accelerated video playback, compositing, proper 2D/3D, etc. Also, it has some random crashes due to its not 100% perfect emulation nature.
