As a strategic point of view. Netsurf is most important browser for a Amiga, for a several reasons.

- A) It is targeted systems like Amiga, so it woun't ever be impossible or too difficult to maintain.
- B) It is possible to influence it's goals and targets.
- C) There is a roadmap to HMTL 5 etc.

For me it seems to more and more difficult to get browser to support Amiga. When support is added they make startegic decisions wich makes Amiga support near impossible in future.
