From what i gathered so far is that there were two versions of the FMV's.

Some reduced in size (to probably play them back on 68k targets stutter-free) simply named xxx.fmv2 and the rest in (i think) the same resolution as the PC version used (called .fmv).

To make them still fit the 3 CDs i'm pretty sure they re-encoded (also the original videos) for size, but i'm not sure and i also know nothing about reverse engineering 68k code, so can't look for a decoder.
