Just released a new version of ArtPazz - it's "just" a minor maintenance release, but, still, go grab it from
https://www.retream.com/ArtPazz ;)

v1.2 (18.07.2021)
* Fixed writes to POTGO: OUTLX and DATLX were set instead of OUTLY and DATLY; POTGO is now managed properly by means of potgo.resource.
* Fixed bug that could cause a graphical glitch in the menus.
* Made a tiny optimization.
* Made minor changes to the directories/files tree.
* Improved manual.
