URL:

I have a Radeon HD 6450 AMD Sapphire card with 1GB RAM. Half height, passive cooled i.e. silent. It works with the following limitations:

- No HDMI out (although it works in MorphOS annoyingly). DVI out and VGA out are fine.
- Max 1080P resolution at 60Hz
- No Warp 3D/Nova support so no Blender, no Shaderjoy
- No accelerated video in Emotion/Odyssey

It does support composition GUI though.

[Edit] And needs the version 2 driver but that should be obvious.
