In the case of MorphOS from WArMUp association has work in this with bounties and personal donations from the president, the problem is what developers to do the donation, and which projects, big, little, all, the other failure in the bounty system in all Amiga system has been searching a project and one developer responsible for it, when some developers has other projects or personal projects, donate computers, humm, when they hasve a cost of 300-400 euros the board where you find this money, because the Amiga users I think that we aren't richmen, and search external sponsors, well, this is a hobby computer not a sport team.
