Voila.

[Qt6 Clock](#)

Of course, what you see is a bit of a cheat. This is produced by saving the image to a file from an offscreen framebuffer. I doubt, though, that it will be any problem coupling the frame to an actual window in a week or so. Qt has progressed much, and it is really well organized in this way.

And thanks for the energizing commitments - it is a really nice environment to work in. :)
