It opens it's window on my X5000. For some strange reason, my X5000 uses CD1: as the first CD instead of CD0: when the first blank CD-RW is inserted. Each time a CD is removed and another one inserted the CD # is incremented (e.g. CD1: CD2: CD3: etc.)

I have AmiDVD version 1.51 installed on my system and use this procedure to get the AmiDVD window to open:

1. Boot or reboot the system.
2. Change the DRIVE tooltype in the AmiDVD icon to CD1 (DRIVE=CD1)
3. Insert a blank CD-RW in the CD drive.
4. Double-click the AmiDVD

I haven't tried to burn a CD since installing OS4FE update1 on my system and have not yet installed update2 so I don't know yet if the above procedure will work with update2.
