Sorry, can't open that page with Odyssey, it just sets up one of those captcha monstrosities which cannot be responded to its satisfaction.

Anyway, I just finally got around to installing and trying the program. Nice work indeed!

I really don't use online radio much, especially not on the Amiga (we do have a separate internet radio box in the kitchen and a tuner in the HiFi stack which can also receive them), but for the rare occasion where I do, it looks like a nice and simple to use tool.

Just one little remark: Why is Denmark not in the country chooser? If I search for Danish **language** stations, I do get a list with Denmark (and a few with Greenland) as country as expected.

Best regards,

Niels
