URL:

The URL for the video source is embedded in HTML5 video tags inside the web site HTML. The browser knows how to interpret these and send them to it's embedded player, on Windows, Mac etc. On Amiga there is much more limited embedded player, and it's generally better to play the stream directly in an embedded player, for which you need a script or to manually find the right URL. Good news for you is, Spectre660 has found the right URL
