I do not have a problem finding a podcasts. However, I have a problem with listening to the episode to the end. Unfortunately, when you play back the material, after some time (about 5 minutes), the material is looped and starts to be played from the beginning. Because during the play of the podcast does not work the navigation buttons in Amigaamp, such as a scroll progress bar, basically a podcast operation function today is not very useful, because you can not listen to the end of the material that has more than a few minutes long.

I am waiting for a new version, with handling other players, because it is possible that the problem is actually a problem on the side of AmigaAmp.

Thanks for a good job!!!
