Thank you for trying MediaVault and for your kind words. To be honest, at first I thought that this "incompatible" podcasts wouldn't be that many, but it seems that a lot of them are not working on AmigaAmp. I'd like to see AmigaAmp supporting them. But I understand what you say that currently podcasts are not quite usable.

I am thinking what can be done for those who do not own Emotion and would like to have a free solution. Is there an alternative player that could work with that?

I will do my best to solve that issue the best way I can.
