About the bit rate, that would be something you would like to see on the list I guess, right? Although it might take some more space?

I was thinking in the list as it shouldn't take much more room, but an alternative might be to display it under the play button somewhere when a stream is selected. Displaying the stream format by the play button might be a good idea as well. Then, especially with Podcasts, we would be able to tell if it would work in the players or not.

I am afraid that favorites feature will be lower in priority, although it is a feature I really would love to have. So I will put a lot of effort to have it as soon as possible.

Understood. I can be patient. Your doing a good job with the progress you have already made.

So, on v1.5.0 I will add a preferences window, where the user will be able to select default player. This way if you want to use Emotion, AmigaAmp or TuneNet, that will be possible.

Would be great. If you want to do a quicker implementation first, maybe use a tootype where the user could set a path to the player of their choice. Call it a beta feature. 😊

In any case, keep up the good work. It's getting better and better!
