Is there any way of making xadopus open the archives in the same lister instead of a new one when double clicking archives?

Yes, this would be fine: To open the archive inside the SRC lister (and not in a new one...). I would have the same question regarding the **ftp.module**: I would like to open the FTP content in the current SRC lister. not in a new one...

May be one of the porters and devs know how to do that?
