@Joeled

I have same problem you have before.

But now me only use one ramslot with one 2gb ramstick in left ramslot.

X5000 and RX580 works fine with one ramstick...as soon use in 2 ramsticks or one ramstick with more than 2gb, problems start..

very strange problem.....

another problem with more than 2gb in my X5000, computer cold boot slower with 4gb ram than 2gb ram
