I was wondering if it is possible in IBrowse to add the new bookmarks to the end, rather than the beginning of the bookmarks list when using 'Bookmarks/add bookmark'.

I have certain sites set up such as ebay, yell.com, AA route planner, at the top of my bookmark list, and I would like to keep them there. Instead of having to drag them back to the top after a few internet sessions.

Also I have some groups set up on bookmarks, for hobby's or current projects I am looking at, and I wondered whether it is possible to save a bookmark directly into a group rather than again dragging & dropping it there.

Any info greatfully received.
