I've uploaded a [new version of SFS](#) which includes a new format supporting large files, for example you can burn complete DVDs (4.3 GB) with AmiDVD using a partition with DOSType 'SFS\2'.

If you still have partitions using the old, non-working SFS 2.x make a current backup and remove SmartFileSystem2 from your kicklayout before installing SFS 1.274, it's 'SFS\2' format is **not** compatible to the one used in the old SFS 2.x versions.
