SFS/2 has 1TB limit with 512byte block size and 64TB with 32Kb block size.

Joerg mentioned something about AmiDVD when he said it supports 4GB file size. Can't remember if he meant with just that program or even if that was the file size limit. If its 64bit it should support way larger files than 4GB.

But he could have set a limit because of limitations in the filesystem. The old SFS 2 filesystem supported larger than 100GB files if I'm not mistaken.
