I think, he means, that a1 chipset is unable to handle two sticks correctly.

I understand technical discussion.
I just don't like his 'tone' toward me.

so you can test in with join couple of big files together and then copy it to ram and again to disk. To be sure make that couple of times (allways delete earlier copy from ram) and then check result to compare original to copied with md5 sum.

I'm intrested in about results allso.

Will do that soon.

I have an old Abit motherboard here that needs work (weak battery, VIA686 USB not fonctionnal, etc) in which I will test the memory modules. I will post results here.

Bye,
