Sorry, I can't help, but you are not the only one with such problems with FastATA. Another user had the same problems, but unlike you not only with SFS, he had them with FFS as well, and no matter what he changed (HDs, cables, settings in the FastATA config, he even tried using PIO0) made it work.

Well, if Setpatch is loaded before the FastATA driver, then I can use up to 137GB without any problems. It also has the speed up. If Elbox can't fix the issue that is probably what I will end up doing.

Good to know I am not the only one with such problems. I wonder if anyone has got the hardware to work as advertised.
