"I hope that it okay am which I for German write, would be on English me too heavy. The problem with the SFS1.275 exists with the Amiga OS 3.9. After that first the instruction "SYS updates on new SFS von Version 1.273 to 1.275 becomes:" no more recognized. It is to be called e.g. not possible the instruction format over the Workbenchleiste, that starts the instruction from the drawer system folds without problems. The second problem is with the new version the non removable disks no longer to format leaves itself. After the high-speed formatting with SFS format or with the format instruction of Amiga OS 3,9 always indicated no valid DOS disk present is. Hope that the problem to solve is."

At least usable.
