Hi @MamePPCA1

**I want to install it basically to run MacOS ...**

I'm not a Mac expert, I'm not a linux expert, I'm not a MOL expert  
I wouldn't even try.

The A1-XE was shipped here over four years ago. It came with Debian  
linux 'Woody' installed. I suffered with it for a year and quarter.  
When OS4pre was installed, i scrapped linux. I don't need it; don't  
want it.

**Any help or advice will be really appreciated.**

Buy a used Mac; it would be easier on you!
