OK not really my vision cause My Amiga One was originally sent to me with Linux and MacOS on it and after all I get some really nice experiences with it so...

What the hell if I want to make meat of the Windows erratic and living in hell experience to give my Amiga One to a new level with Amiga OS 4.0, Linux and MacOS installed?

I hope you respected my opinion as I did with yours.

It's my goal and I will put all my efforts to make my dream come true.

Help me and I will be really grateful with you the Amiga world.
