I am very stuck now and I am thinking other ways to do the installation like the Network or on last instance sending the computer to a dealer that can make the work for me.

I have downloaded the Debian 4.0r1-powerpc-netintall ISO.

The question is how can I burn to CD and convert it to directories and files as the ISO I don't know how it works directly burned to a CD.Does this version works fine with Amiga One?

I need to get OS 4.0 Final too,have sent some e-mail to hans of Hyperion but don't have answers about this very important chapter.

I am thinking about to delete my Linux partitions and redo it again,what's the best way to get my system up and running with OS 4.0+Debian Linux\*MacOSX?

I am lost in the ice.
