Just thought I would let you guys know that this problem has been solved by a beta driver from Elbox. The only change in configuration to my initial post was to use SFS 1.276 (to fix the SFS bug) and the new beta Elbox driver (to fix a bug possibly with interrupt mode - maybe it would have worked with that mode off?).

I can also use PIO5 mode which is slightly faster and get 8.5MB/s without interrupt mode.

Thanks for all the help and suggestions.
