I've just received the following requester from SFS:

SmartFileSystem DH5: (a1ide.device, unit 1)

SFS has ran out of cache buffers.

How many buffers are you using for this partition? You can use "addbuffers DH5:" to check.

Further information...

It appears that when I updated to SFS 1.277,
the diskcache.library.kmod did not also
automatically update (I had assumed it would).

I still had version 3.13 of
diskcache.library.kmod in my kickstart.

Perhaps this is the source of the trouble.

No, it's not related to the diskcache.library version. There isn't much different in 3.16 compared to 3.13 anyway,
the "RAID" DOSType I forgot to remove in 3.13 is gone, but that's about it.
