Hi Guys,

I have a 160Gb HD of the following specs....

sii0680ide.device

PATA

I am trying to set it up and format it with Media Toolbox in OS4.0, I am using 512 block size, 5000 buffers and sfs\00. All goes fine setting it up until I try to format it, when I get the message that the drive is full (quick or normal format).

If you are using a single partition for the whole HD it's because the max. partition size supported by SFS is 128 GB.
