Have a look at the sfs-changelog...

1.254 (4.3.2006)

- The limits mentioned in the 1.245 notes were wrong, sorry. The actual partition size limit of SFS 1.x is 128 GB, no matter which blocksize you are using. Changed the checks to the actual limits. You can continue to use too large partitions, but you may get "disk full" errors (instead of a trashed partition) even if there is still free space on the partition.
