URL:

I'd like to have a couple more to test my (enhanced) ctorrent port dnh3.2. The latest one. I have one tester already. I'd like to have atleast one with os4 classic. Since i don't have that myself. I am working on a gui but since it's taking quite longer to make than first expected i though i'd get this tested and release it and bring updates when the gui is working(better than now). 😊

Have just uploaded V2.1.

Changes:

*Removed some printf output if pressing ok in the asrequester without choosing a file,or the .torrent was broken.

*Added pause button in prefs tab. Sets titlebar to 'paused' when active.

*Added support for big files :) Thanks to Jesus Fernandez(yescop) for fixing that.

And thanks to mason for the icon.

Yes,the ratio doesn't work yet. Will fix that for next time, sorry.

IF people encounters any bugs/problems etc. Please report them. 😊

Thanks
