hi tried reinstalling os 4 to my ppc 1200

with sfs but all I got was the machine would lock after few secs and it say ram lib error I have taken memory and card out and still nothing so reinstalled fastfilesystem 07 Long file names and it fine.

never had this problem before .

I like to use sfs as it alot faster and fastfile really works my ide hd alot.

thanks for any help what settings should I use , I thought must be because I have to use long file name settings but cant seem to work that part out what to change. had set to 02 and 00 both did the same thing.
