I've been experimenting with ipf because I am quite adept with iptables on Linux.

I also had a great email from the old-skool genius behind Amithlon Bernd Meyer on whose input the whole section on stack attacks will have to change!

Thank you Bernd.

If anyone is even slightly concerned about attribution don't be please I will do my best to credit every source of information in full. If you aren't happy with how I have reworded your submission I'll revise the FAQ.

Desperately need the Wiki though, isn't there a general Amiga Wiki somewhere I read about started by one of the #amiga.org channel members?

If anyone has a link please post it.
