URL:

@joerg

Neither of these URLs work in OWB 1.21:

<https://secure.tigerbyte.biz>

<https://secure2.tigerbyte.biz>

I can't give any more info than "it doesn't work" because there is none. I have even tried to start OWB from CLI if it is printing some info to stdout/stderr and it isn't.

The google URL you posted does work though.
