plz add new version options DISABLENEW FONTS for 68k and PPC using old fonts bitmaps like OWB 1.2 (68k) is faster rendering vs OWB 1.3 (68k).

In the AmigaOS4 OWB I could move the font implementations into shared objects and you could use the one you want, embedded bitmap fonts or AmigaOS outline fonts. Using the embedded bitmap fonts might make it more usable on classic Amigas, especially the very slow BlizzardPPC.

On AmigaOS 3.x that's not possible and I'd have to build 2 AmigaOS 3.x OWB executables instead. It will never be usable on real 68060 CPUs anyway, and on UAE there shouldn't be a problem with the outline fonts?
