Well, the idea is to have a limited version with a C/C++ plugin (preconfigured for the AmigaOS 4 SDK) available to be distributed with the next SDK update.

OMG 🤪 That \*is\* a news !!! Such a thing available as a limited version for free with the SDK ??? For such a generosity you either be God, either rich, either completely mad 😊

I hope this will happen, because this might be an incentive factor to have new developers to start coding.
